Wayne County Health Department

2018 Annual Report

Public Health
Prevent. Promote. Protect.

Message from the Health Commissioner

Nicholas V. Cascarelli, Ed.D

The Wayne County Health Department was a very exciting place in 2018! Some of the highlights include:

- Applied for accreditation with the Public Health Accreditation Board, the national accreditation organization for state and local health departments.
- Offered WIC clients the ability to walk in without an appointment two days per week. Our WIC program has also established a Farmer's Market that allows WIC clients to buy fresh produce from local Farmers that participate in the program.
- Expanded vaccinations and outreach into Orrville and Mount Eaton.
- Updated our emergency plans with the latest procedures in emergency management so that we will be able to lead public health emergencies or support other types of emergencies that may occur in the community.
- Assisted 30 families with septic repairs/replacement that could perhaps not have otherwise afforded it.
- Received high marks on several of our environmental programs from the Ohio Department of Health and the Ohio Environmental Protection Agency.
- Increased customer satisfaction comparing 2018 to 2017 in our Vital Statistics (Birth and Death Records) program.

The highlights above are not an all-inclusive list, but a snapshot of the wonderful ways we serve the community and how we exhibit exemplary performance. I would encourage you to read more about these highlights in the report. As mentioned in prior years and as will be mentioned in the future, we base our work on maintaining the gains in our performance and continually working to improve our performance.

As always - your comments and suggestions are desired. The Wayne County Health Department is YOUR Health Department.

Thank you,

Nicholas V. Cascarelli Ed.D.

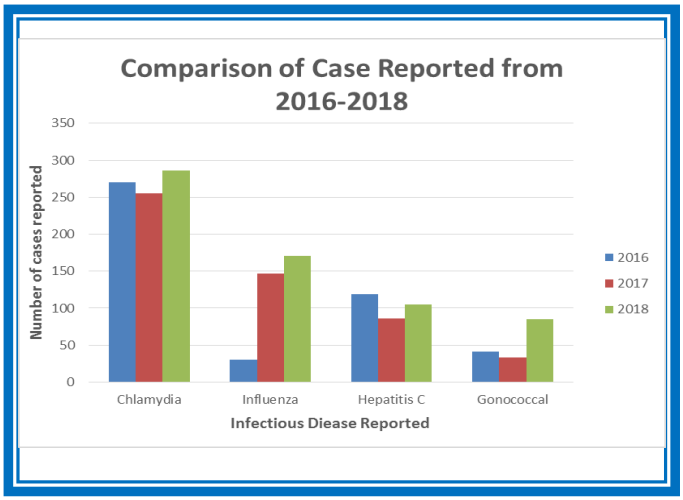
PATIENT CARE SERVICES

Wayne County Infectious Disease Report 2018

The Wayne County Health Department (WCHD) infectious disease nurses investigated a total of 835 infectious disease reports in 2018. That is a 20% increase in the total number of disease reports compared to 692 reports received in 2017.

The four most reported diseased were as follows:

- Chlamydia continues to remain the most reported disease resulting in a 12% increase from 2017.
- Influenza, associated with hospitalization, was the second most reported disease. It had a 16% increase from 2017.
- Hepatitis C remains the third most reported disease and has a 22% increase in cases from 2017.
- Gonococcal infection is the fourth most reported disease with a 157% increase in cases from 2017.



There are many factors that can correlate with the increase in reported infectious diseases. The upswing in sexually transmitted infections, especially chlamydia and gonococcal infections, and the continued drug epidemic go hand in hand. Substance addiction is known to be associated with disease risk for sexually transmitted infections as well as Hepatitis C. In response, hospitals and addiction rehabilitation programs have been testing individuals who indicate past and present drug use for Hepatitis C to diagnose earlier.

Influenza cases associated with hospitalizations may have many things in common; one being the age of the person affected. The majority of the cases are in the age group of 65 years and older. The Influenza vaccine continues to be one of the largest misunderstood vaccines and a large majority of those diagnosed with Influenza have not received the vaccine. Co-morbidities, such as chronic respiratory issues (i.e. COPD, asthma), heart disease, diabetes, and being immune compromised are other known factors in influenza infection.

Wayne County Disease Report 2018

Reportable Condition	Count 2018	Count 2017	Count 2016	Disease Class
Babesiosis	0	1	1	B
Botulism -Infant	0	0	1	B

Total Reports for Year	**835**	**692**	**657**	

A = Diseases of MAJOR concern (report immediately)

B = Diseases of significant concern (report by end of next business day)

Results as of 01/01/2019 using ODRS "Created Date" and includes all Confirmed, Suspect, and Probable cases. Information is accurate on day of report and subject to change as cases are added/updated.

Continued on p. 4

Continued from p. 3

Immunization Outreach Clinics

The goal of the Wayne County Health Department's (WCHD) Immunization program is to protect the community from vaccine preventable diseases. In our outreach clinics, we have made some tremendous strides with our Amish neighbors. We currently offer clinics at the Kidron Mennonite Church as well as the Care Center in Mount Eaton. The Mount Eaton clinic began in February 2018 and has seen a steady growth every month. We provided services to 53 clients in 2018 at Mount Eaton. Kidron continues to have a solid attendance of 304 clients in 2018.

The Health Department also maintained a clinic at the Christ Church United Church of Christ in Orrville. This clinic began in June of 2017. While not as fruitful as we had hoped, we provided services to 34 clients at this clinic. The clinic was relocated in January 2019 to partner with the Viola Startzman Clinic at their Orrville location. This allows us to expand our services to not only offer immunizations, but to also include Hepatitis C screening and referrals. As the Orrville Clinic grows, we hope to expand services to mirror those at the Walnut Street branch. Currently, the Orrville Clinic runs from 11:00 AM - 1:30 PM on the second Wednesday of every month.

PHEP

The goal of the Public Health Emergency Preparedness (PHEP) program is to enhance local ability to respond to bioterrorism, infectious disease outbreaks, and other public health threats and emergencies.

Public Health Emergency Preparedness (PHEP):

Wayne County Health Department's Public Health Emergency Preparedness (PHEP) program is funded through an annual grant provided by the Ohio Department of Health (ODH). The health department's PHEP program is currently in its seventeenth year and is managed by the department's Emergency Response Coordinator. The goal of the program is to strengthen our ability to respond to bioterrorism, infectious disease outbreaks, and other public health threats and emergencies.

Over the last year, the Wayne County Health Department has continued to make great strides in our emergency response plan development and maintenance activities. The health department has updated our Basic Plan, Epidemiology Plan, and created a Mass Fatality Plan which outlines our roles and responsibilities during a mass fatality event. The health department has also effectively executed a multitude of exercises and drills to ensure that our equipment remains operational and to test our internal plans and procedures to measure their effectiveness.

The health department continues to utilize the Wayne Holmes Emergency Coalition (WHEC) to collaborate and coordinate emergency preparedness initiatives and information sharing amongst community healthcare partners. In the last year, the health department expanded membership to the group to also include representatives from alternate and extended care facilities.

As we move forward into 2019, PHEP program priorities will continue to focus primarily on emergency planning activities, and drills and exercises to ensure that preparedness efforts benefit all the residents in Wayne County.

WOMEN, INFANTS, AND CHILDREN (WIC)

The Supplemental Nutrition Program for Women, Infants, and Children is a federal program under the auspices of the USDA. WIC serves working families as well as the unemployed who are income eligible (185% of poverty level). Participants include pregnant women, breastfeeding women, women who recently had a baby, infants, and children up to five years of age, who are at health risk due to inadequate nutrition. The program provides nutrition education, nutritious foods that promote good health, lactation support during pregnancy and postpartum and referrals to various support services. All of this is an effort to improve pregnancy outcomes and reduce infant mortality by reducing low birth weight and preterm infants as well as providing infants and children with a healthy start in life by improving poor or inadequate nutrition.

THE WIC TEAM

Back Row: **Wendy Anderson, Kathy Wade, Deb Martin, Susan Varnes, Pam Armstrong**

Middle Row: **Taylor Hause, Ashley Kuehn, Elesa Eaken, Caitlin Fridley**

Front Row: **Carli Gump**

Eligible participants receive nutrition education, health assessments, breastfeeding education and support, supplemental, highly nutritious foods including cereal, eggs, milk, whole grain foods, fruits and vegetables, baby foods and infant formula. Referrals are provided to maternal and child health care and other child and maternal health and social services programs.

Wayne County WIC serves an approximate caseload of 1400 participants and has a budget of $460,348.00. Statewide, as of December there were 75 WIC clinics with approximately 208,000 WIC participants being served. Directors were notified that funding is expected to be reduced moving forward and WIC continues to operate on a Continuing Resolution from the Federal Budget for Fiscal Year (FY) 2019.

FARMER'S MARKET—2018

This was an exciting Year for WIC! One project started this year was the Farmer's Market. The initial launch was held at the Downtown Wooster Farmer's Market on July 9, 2018. Overall, 100 WIC participants received vouchers for fresh fruits and vegetables to use at the Farmer's Market and other locations in 2018.

Walk in days have been added to the WIC schedule. Tuesdays and Fridays are Walk In Clinic days from 8:30 AM – 3:00 PM and is a first come, first serve program . Walk in times allow for the participants to work around their schedule and have been very well received.

Our Breast feeding department was very busy this year. Wayne County WIC was one of 78 local WIC agencies across the country to receive the Gold Loving Support Award of Excellence from the USDA. The breastfeeding program met the rigorous core components of the Loving Support model for a successful peer counseling program.

The Wayne County Breastfeeding Coalition established a mother to mother breastfeeding support group. It is free and open to all breastfeeding mothers and babies. The group is called, The Lactation Ladies Club (LLC) Mother to Mother Breastfeeding Support Group and it held its first meeting May 8, 2018. Typically, the group meets the second Tuesday of each month at the Wayne County Public Library at 10:30am. Follow the Wayne County Breastfeeding Coalition's Facebook page for future meeting dates. Wayne County WIC Lactation Department continues to offer free breastfeeding classes to all pregnant WIC participants and offers lactation counseling to all pregnant and postpartum mothers.

AWARD OF EXCELLENCE

Ashley Kuehn, Carli Gump

We also celebrated an ending to a long career, as Kathy Wade has retired and now has plans to spend more time with her children and grandchildren. We all wish her well and she will be missed. Her position has been filled by Wendy Anderson RD, LD. Wendy has been a part time dietitian for the WIC program.

Susan Varnes and Kathy Wade

ADMINISTRATION

The Administration unit of WCHD consists of fiscal management, vital statistics, purchasing, accreditation, and human resources.

Vital Statistics has been busy this year! Due to changes in the required documents at the License Bureau, our staff has seen an influx of Vital Statistics traffic, mostly for certified Birth Certificates. 2018 Revenue for Birth Certificates was $119,550.00. The previous year, before the changes, the total 2017 Revenue for Birth Certificates was $105,075.00. That's an increase of almost $15,000.00 which translates to 600 Birth Certificate sales!

We recently spoke to Holly, a supervisor at the Wayne County BMV. She let us know that if a resident wants a new Compliant Driver's License, if their I.D. or License has expired over 60 days ago, or if their old Birth Certificate is not readable, they will need to bring in a Certified Birth Certificate to the License Bureau. More changes are coming to the BMV, beginning in October 2020, if residents want to fly domestically, if they need a passport or want to visit a military base, they too will need to present a Certified Birth Certificate. So it sounds like Beth Knopp, our Vital Statistics Registrar and Donna Merriman, our Vital Statistics Deputy Registrar and the back-up staff consisting of Danielle Sharpe, Beth Amstutz-Archer and Chrystal Marcum will continue to be busy into 2019 and 2020.

This year , the administration unit welcomed a new Director, Chrystal Marcum, MBA, who came to us from the private sector and has already made some great changes to increase efficiency and advance customer service.

THE ADMIN TEAM

ACCREDITATION

The Wayne County Health Department has applied for accreditation from the Public Health Accreditation Board (PHAB) in 2018. We have begun sending documentation to PHAB and will finish doing so early 2019. Once approved, PHAB sends a team of site visitors to visit the department and see how the agency works on a daily basis. Then if the documentation is approved and the site visitors approve the Health Department will be accredited. We are hopeful this will occur in late 2019. Accreditation lasts for 5 years and then WCHD will need to be reaccredited, through a similar process.

ACCREDITATION COORDINATOR

Cortney Ardrey

ENVIRONMENTAL HEALTH SERVICES

WCHD Deemed a "Model" Community Wide Septic Assistance Program

Since 2016, the Wayne County Health Department has received the Water Pollution Control Loan Fund (WPCLF), which is a grant from the Ohio Environmental Protection Agency (OEPA) to help low income residents with costly repairs or replacements of septic systems with priority given to those systems that are causing a public health nuisance. In that time, we helped 30 residents replace or repair their septic systems with no or little cost to the homeowner. At an average cost of $12,000 per repair/replacement, we have received over $300,000 dollars on behalf of residents from the WPCLF.

As mentioned previously, the funds are through the Ohio EPA. The WPCLF provides financial assistance in the form of principal forgiveness subsidies to counties and local health districts so that they can assist low to moderate income homeowners with the repair or replacement of failing HSTS. The principal forgiveness subsidies do not require a repayment of principal or any payment of interest. This is a huge benefit to residents in each township. The scope of work is limited to one septic system per property owner. The WCHD staff conducts an inspection to determine what work needs to be done to correct the public health nuisance or hazard to meet the state's sewage treatment rules. Using the WPCLF specifications and cost estimate analysis, the WCHD solicited competitive bids from approved contractors. A contract is signed with the lowest and best bidder. WCHD has the option of walking away from a project if costs are too high or does not meet "failed" criteria. WCHD determines the lowest and best bidder. Contracts must be completed between the WCHD and the contractor. The contractor must be a registered septic installer and approved bidder.

The WCHD is currently funded at the time of this article and is still looking for more residents that may need assistance. The dwelling must be occupied by the property owner and meet income requirements. Costs of the soil evaluation, design, site review, permit, and any other administrative fee will count toward meeting the property owner portion of the cost share, if applicable. The goal is to assist property owners in repairing or replacing failing or substandard household sewage treatment systems. This program is a win-win. It has helped several people with septic repairs/ replacement that could not have otherwise afforded it and it also keeps the environment safe as it abates several public health nuisances that may not have been otherwise. Not only is this a good program, but we do it well. In a recent evaluation of the program, correspondence from the OEPA concluded "*Wayne County has been a model example for this funding. OEPA along with the residents of Wayne County are very pleased with your efforts. Once again, thank you for your help!*"

For more information, contact the WCHD office at 428 W Liberty St, Wooster, Ohio 44691 or call Vaughn Anderson, Director of Environmental Health at (330) 264-2426.

Successful State Surveys-We Are Protecting You!

The Wayne County Health Department Environmental Health Unit promotes Public Health by addressing the environmental factors that can adversely affect human health. The primary role of the environmental staff is to prevent human illness or injury through public education, regulation and advocacy. While responding to public health concerns is a function of the environmental division, the majority of our effort is directed towards education, and disease prevention and enforcement. In order to determine whether the Environmental Health (EH) Unit is carrying out that role, The Ohio Department of Health (ODH) and the Ohio Environmental Protection Agency (OEPA) are both mandated to survey local health departments in various programs they (Wayne County) are authorized to administer.

These formal surveys take several days with both administrative review and field review of each Sanitarian working in the program being surveyed. A typical survey will review licensing/permitting processes, applications/registrations, transmittals, investigation reports, and field inspections. In addition, all surveys review the Board of Health adoption of fees and the cost analysis used to establish those fees. By reviewing these items, the ODH or OEPA will determine whether the EH Unit is providing optimal services to the community in each program being surveyed.

In 2017 and 2018, the EH Unit was surveyed five times by the OEPA and ODH. The programs surveyed included the Solid and Infectious Waste Program, the Recreational Camp Program, the Public Swimming Pool Program, the Private Water System Program, and the MS4 Dry Weather Flow/Illicit Discharge Program. These surveys are very encompassing and cover a wide range of processes and procedures to ensure proper program administration. Upon review of each of the survey findings, the EH Unit was determined to be in substantial compliance and placed on an approved list of health departments authorized to administer and enforce each respective program. In addition, it was noted during some of surveys that the EH Unit goes above and beyond what is required in administering each respective program with exemplary remarks. These surveys indicate our EH Unit does its job well. We are protecting Wayne County residents and the environment.

MISSION

The Wayne County Health Department safeguards the health of its residents by:

*Promoting healthy lifestyles through education

*Preventing and monitoring disease

*Protecting and preparing against environmental and public health risks

VISION

The Wayne County Health Department will serve as a model for its ability to advocate and maintain a healthier and safer community.

VALUES

Innovation - We embrace change while venturing into the future with information, research, and technology.

Respect - Our endeavor is to openly communicate, show compassion, and treat everyone with dignity, to ensure that all individuals are valued and informed.

Teamwork - Our team is strong because we care, we share, and we actively listen. Because we help, respect, and support each other, we are effective and dependable.

Accountability - We use responsible and professional judgment in assessing and addressing all community health needs, in a timely and effective manner.

Education - As a visible and trusted source of health-related information, guidance, and assistance, we provide and maintain a trained qualified workforce.

Ethics - We conduct ourselves with honesty, equality, and integrity as we serve the community.
