Phone: (330) 264-9590
Fax: (330) 262-2538

Message from the Health Commissioner

Nicholas V. Cascarelli, MHHS

Dear Community Member,

I would like to share with you some of the great things we have done at the Wayne County Combined General Health District in 2014. I would like to preface my updates by sharing with you a list of the ten essential public health services.

Ten Essential Public Health Services

1. Monitor health status to identify and solve community health problems.
2. Diagnose and investigate health problems and health hazards in the community.
3. Inform, educate, and empower people about health issues.
4. Mobilize community partnerships and action to identify and solve health problems.
5. Develop policies and plans that support individual and community health efforts.
6. Enforce laws and regulations that protect health and ensure safety.
7. Link people to needed personal health services and assure the provision of health care when otherwise unavailable.
8. Assure competent public and personal health care workforce.
9. Evaluate effectiveness, accessibility, and quality of personal and population-based health services.
10. Research for new insights and innovative solutions to health problems.

It is important for me to share these with you because they are the backbone of what health departments should be working toward providing if not at least facilitating. The following highlights of 2014 display how we are involved in providing many of these essential public health services to the residents of Wayne County.

In our Environmental Health Unit, the Ohio Department of Health evaluated three of its programs - Public Swimming Pools, Recreational Camps and Solid Waste and found that we were in substantial compliance. In preparation for the new Household Sewage Treatment System and Tattoo and Body Art codes, the Environmental Health staff attended multiple trainings and conferences and communicated the changes of the codes to the operators in advance of their effective dates.

In our Patient Care Unit, we had a very challenging year as we were one of six counties directly involved with the measles outbreak. We conducted 16 outreach clinics and immunized over 1800 people to do our part in controlling the spread of the disease. As a result of our efforts, we along with the other five counties involved in the response, were recipients of the **2014 Public Health Organization Award from the OSU College of Public Health**. In addition to measles, we were also a part of the statewide response in controlling a potential spread of the Ebola virus. Lastly, Kim Heim our long time WIC supervisor retired this year after 15 years of service to the Health Department.

As we move forward, I would like to acknowledge the contributions of Dr. Greg Halley who retired in 2014 as Health Commissioner after 20 years of dedicated service to the community. It is my hope that we can build upon the many great things he has accomplished here during his time as Health Commissioner.

Sincerely,

Nicholas V. Cascarelli

Public Health
Prevent. Promote. Protect.

VITAL STATISTICS

The Wayne County Health District maintains birth and death records occurring in Wayne County beginning in 1908 to present. We are now able to issue certified **BIRTH CERTIFICATES** for anyone born in the state of Ohio. **DEATH CERTIFICATES** may be obtained from the local health department where the death occurred. Birth and Death Certificates are permanently placed on file

VITAL STATISTICS 2014

<u>Certificates Recorded</u>		<u>Leading Causes of Deaths</u>	
Wooster City Births	1055	Other Cases	358
Orrville City Births	392	Heart (all types)	261
County Birthing Center	281	Cancer (all types)	168
Homebirths	<u>69</u>	Accidents	44
Totals	1797	Influenza/Pneumonia	33
		Alzheimer's	23
Wooster Deaths	319	Suicides	10
Orrville Deaths	105	Parkinson's/Hodgkin's	8
Rittman Deaths	49	Pending Cause	3
County Deaths	<u>440</u>	Undetermined Natural Causes	4
Totals	913	Sudden Infant Death Syndrome	1
		AIDS	0
		Homicides	0
Fetal Deaths	17		

MISSION STATEMENT

To safeguard the health of Wayne County residents by promoting healthy lifestyles, protecting against environmental hazards, and preventing and monitoring communicable diseases.

PATIENT CARE SERVICES

The Patient Care Services Division of the Wayne County Health Department consists of three major components: public health nursing, emergency preparedness, and WIC. In these tough economic times, we continue to work to focus our limited resources on our critical infrastructure programs that are at the heart of preventative services. 2014 highlights of some of these important services include:

COMMUNICABLE DISEASE CONTROL is a major cornerstone of critical infrastructure programs provided by patient care staff. Many communicable diseases are required by Ohio Administrative Code to be reported to the local Health Department. Communicable Disease nurses review positive lab findings, investigate each as necessary, provide education, and follow-up with the case patients and their medical providers to ensure appropriate treatment/prophylaxis to prevent the spread of disease. All confirmed cases are electronically reported to the Ohio Department of Health. Our epidemiologist monitors surveillance data and identified concerns are shared with other public health officials and local medical providers as appropriate. **The Communicable Disease nurses investigated 614 cases of state reportable class A and B diseases during 2014.** Chlamydia and Gonorrhea remain the most prevalent diseases reported.

In the spring of 2014, a Measles outbreak occurred. The Communicable Disease nurses contacted and monitored the initial six reported cases in Wayne County and contacted over 300 hundred families that were determined to be contacts to the six cases. The Wayne County Health Department held 16 MMR clinics and had given 1,822 doses of vaccines to at risk populations.

In October 2014, the Wayne County Health Department was notified that 2 residents came in contact with a positive Ebola case. The Communicable Disease nurses monitored the two residents twice a day for any symptoms of Ebola. In December 2014, the Communicable Disease nurses monitored a resident who traveled to Mali for signs and symptoms of Ebola. The Communicable Disease nurses currently continue to monitor any traveler from affected countries.

TUBERCULOSIS CONTROL. An important component of communicable disease control is tuberculosis management. Our public health nurses work to minimize the public health threat posed by cases of active tuberculosis in our community through careful evaluation, facilitation of drug therapy for clients without the resources to pay for medications, closely monitored treatment regimens, and promotion of preventive therapy. The public health nurses will also visit homes or other community locations to investigate the possible spread of disease. **In 2014, there was 1 case of active tuberculosis that received treatment facilitated through the Health Department. There were 244 tuberculin Mantoux screening tests performed in 2014.**

SEXUALLY TRANSMITTED DISEASE CLINIC (STD) AND HIV CLINIC. Another component of communicable disease control offered is the weekly STD and HIV Testing Clinic. HIV testing and diagnosis and treatment of chlamydia, gonorrhea, syphilis, and herpes are provided. **There were 47 clients served in this clinic during 2014.**

Wayne County Annual Communicable Disease Report - 2014

Reportable Condition	Count 2014	Count 2013	Count 2012	Disease Class
Amebiasis	0	0	0	B
Campylobacteriosis	13	21	23	B

Total Reports for Year	529	536	590	

A = Diseases of MAJOR concern (report immediately)

B = Diseases of significant concern (report by end of next business day)

Results as of 1/5/2015 using ODRS "Created Date" and includes all Confirmed, Suspect, and Probable cases. Information is accurate on day of report and subject to change as cases are added/updated.

Continued from p. 3

IMMUNIZATION PROGRAM. The Immunization Program is the second major critical infrastructure program provided by the patient care staff. The goal of the immunization program is to reduce the number of vaccine-preventable diseases through preventive immunization. In 2014, **5,601 immunizations (up from 4,857 in 2013)** were administered in WCHD walk-in clinics, both in-house and at outreach clinics. This ranges from those who get their annual influenza vaccination to the two-month old baby receiving their first well child vaccinations. The range of vaccines given at the health department is great. Over 25 different immunizations are offered through the health department. We immunize both children and adults to prevent diseases such as pertussis, measles, cervical cancer, meningitis, and tetanus.

IAP GRANT. In addition, the Health Department is a recipient of an Immunization Action Plan Grant from the Ohio Department of Health. These grant funds are used to offer special monthly childhood immunization clinics in Apple Creek and Kidron and to enhance our immunization education programming. The WCHD is committed to educating and coordinating immunization services with other health care providers in Wayne County. There is a trained immunization nurse educator who visits private physician offices to assist providers and to improve the immunization rates among children.

INTERNATIONAL TRAVEL VACCINES. The Health Department offers individualized travel consultations for clients traveling abroad. During the consultation the public health nurse reviews the client's travel plans, health history, and current CDC travel vaccine recommendations. Client's may then receive vaccinations and/or prescriptions for medications to prevent diseases such as Typhoid fever, Hepatitis A and B, Yellow Fever, Meningitis, Malaria, Rabies, etc. There were **223 Travel Consultations provided to residents traveling abroad in 2014.**

BUREAU FOR CHILDREN WITH MEDICAL HANDICAPS (BCMh). BCMh provides financial assistance for medical care and case management of a variety of chronic handicapping conditions in children (birth to age 21). Public health nurses are an important part of Ohio's Bureau for Children with Medical Handicaps. Our BCMh nurses help families navigate all phases of this program. This is achieved by working with families to locate BCMh providers, helping the families understand and complete the required forms, and ensuring that the family understands the program. The BCMh nurses are advocates for the families. Educating the families of their rights and responsibilities in regard to BCMh and other programs in which they may be eligible is an extensive component of the program. **488 children were served by BCMh in 2014. This was an increase from 480 served the previous year.**

VISION SERVICES AND PLAN (VSP). The health department continues to provide vision services to Wayne County children, utilizing the VSP program. The VSP program provides vouchers for free eye exams and glasses to income eligible children (under 18 years or still in high school). **In 2014, 53 participants** received an eye exam and glasses from local providers through VSP. This number is **up from 44 participants in 2013.**

The Public Health Emergency Preparedness (PHEP) grant is currently in its fourteenth year and continues to provide the health department with the opportunity to build upon vital infrastructure and expand our emergency preparedness and planning capabilities. The expansion of these

capabilities is accomplished through plan development, disease surveillance, personnel training, and the execution of drills and exercises. A critical component to the success of the PHEP program also involves the development and maintenance of relationships among our community and regional partners and the coordination that ensues.

Over the past year, the health department significantly tested its emergency planning and preparedness capabilities during two public health events that gained national media attention. The health department's response during the regional measles outbreak was substantial and required more staff and resources than we had available, which necessitated us to acquire volunteers and assistance from neighboring counties. During the outbreak, the health department conducted sixteen (16) mass vaccination clinics, administered 1,714 doses of the Measles-Mumps-Rubella (MMR) vaccine, provided disease surveillance and monitoring, maintained emergency communications, and conducted information sharing with key stakeholders throughout the duration of the event. The measles response effort lasted for 122 days and required 1,515.25 hours in personnel hours to conclude the event.

In preparation for an Ebola event, the health department and community partners assembled to develop a common operating picture and provide a platform for which information sharing activities could be implemented. Health department staff was also responsible for contacting individuals who came into contact with the Dallas nurse that tested positive for Ebola; conduct surveillance and monitoring operations; and submit surveillance data to the State as required. Internal department personnel accumulated 235.25 man-hours in preparation for an Ebola event.

As we move into 2015, the Emergency Response Coordinator will continue to update and maintain internal plans to ensure that they comply with Federal, State, and local standards, and address grant deliverables that include: maintaining partner relationships, training of internal staff, and exercising plans and procedures.

WOMEN, INFANTS, AND CHILDREN'S SERVICE (WIC). WIC is a supplemental food nutrition education program serving eligible pregnant, breast-feeding, and postpartum women; infants; and children up to five years of age. Participants meet with health professionals every six months to review their dietary habits and set goals for improvement. Participants also receive nutrition education in the form of newsletters, group classes, and/or one-on-one WIC health professional. WIC staff also makes referrals to physicians and other community assistance resources.

Food vouchers are printed at three-month intervals for the WIC participants to redeem at nine local vendors and one special pharmacy. The food vouchers are redeemable for nutritious foods such as milk, eggs, cereal, peanut butter, canned/dried beans, and 100 percent fruit juice. All categories of participants receive a cash based fruit and vegetable voucher and are able to select from a variety of fresh, frozen, or canned healthy choices at the store.

Wayne County WIC serves an approximate case load of **2,100** participants. Eligible participants have an income at or 185 percent of the Federal Poverty Level. For example, a family of four could have an annual gross income of up to \$44,123 and meet the WIC income guidelines. Participants must also meet residency requirements and nutritional risk criteria to qualify.

Nutrition education remains a core part of the WIC program and the participants are offered a variety of choices to complete education that meets their needs. The kiosk continues to be utilized for individual education modules as does an internet option for clients who cannot get into the office for class. Classes are now taught by WIC Health professionals twice a month in addition to two breastfeeding classes taught by Certified Lactation Counselors from WIC staff. Nutrition education topics covered in class are geared towards our participants needs. New class topics will continue to be implemented in the coming months.

Long time Nutrition Supervisor at Wayne County WIC, Kim Heim, RD, LD, CLC retired November 30, 2014. Kim successfully guided the WIC program through major changes and transitions throughout her 15 years as supervisor. Her contributions were many and will be missed. Her replacement, Kathy Wade, MA, RD, LD has been with our WIC program for over 20 years as a nutritionist bringing much knowledge and experience to the position.

Breastfeeding Coordinator, Becky Thornton, RN, CLC also retired in November of 2014. Carli Gump, RN has taken the reins to head up the breastfeeding department at Wayne County WIC.

Kathy, Carli, and WIC Nutritionist, Eles Eaken will be attending Certified Lactation Counseling (CLC) training this spring to better serve WIC mothers and infants. This will increase the number of Certified Lactation Counselors in our agency to four. The Breastfeeding Department was again involved in the annual Baby Fair held in conjunction with Woosterfest at the Wayne County Library. The event was well attended with 25 vendors and approximately 160 adults attending. Community members were able to obtain information on a variety of topics including breastfeeding, immunizations, childcare, and other services available to young families throughout the county.

The WIC Advisory Council continues to meet twice a year and remains an integral part of our program. It allows for participant and vendor concerns to be addressed, collaboration with local physicians, and for updates to be shared with other community organizations. The state WIC program has initiated the rollout of the Electronic Benefits Transfer Card sooner than anticipated. The pilot programs completed last fall were well received in Licking and Greene Counties. Statewide implementation is hoped to be complete by the end of 2015 with 30 more counties to be on board by the end of March. This new WIC Nutrition Card (WNC) will streamline the checkout process for both participants and vendors. Many clinics statewide have seen an increase in participation since its implementation. This new system should also reduce the potential for fraud as participants will have one card per family and will be required to use a PIN to receive benefits. When a card is reported lost or stolen all current benefits will be voided along with the missing card. Wayne County's target date for the WNC is July 2015.

Wayne County WIC had its Management Evaluation from the WIC office October 7th through the 9th, 2014. This is an intensive review of financial, intake processes, nutrition education, voter registration, referral processes and breastfeeding promotion. Overall our results were excellent. We received only one corrective action in regard to the way special formulas are handled.

IMMUNIZATIONS 2014

<u>Type</u>	<u>No. of Doses</u>
DTaP	152

TOTAL	5,987

Wayne County WIC received results from the most recent Participant Survey available from state WIC. A 91-93% satisfaction rate with friendliness and respect issues from staff was received. Overall results were very positive. Most participants felt that the length of their appointment was just right and that the Authorized Foods List was easy to use. Many participants reported that they have changed their eating/cooking behaviors to have a more balanced diet because of WIC.

ENVIRONMENTAL HEALTH SERVICES

Environmental Health is the application of sanitary principles in disease prevention. Activities aimed at the preservation and the improvement of the environment have been historically a major part of public health. Many of the sanitary principles that we apply are written in the form of laws and regulation. Our activities include inspection, consultation, plan review, sample collection, education, and enforcement. Some of the major programs administered by the staff of the Environmental Health Division are highlighted below.

The Environmental Health Division is located in the lower level of the County Administration Building at 428 W. Liberty Street in Wooster

The Environmental Health staff spent **13,406 hours** in 2014 performing health activities including investigations, inspections, consultations, giving presentations, and working with and for the public to ensure a healthy environment. The Environmental Health staff investigated **208** public health nuisance complaints last year.

FOOD SAFETY PROGRAM staff conducted **673** food service operation inspections, **320** retail food establishment inspections, **74** vending location inspections, **248** mobile food service operation inspections, and **68** temporary food operation inspections. In addition, staff conducted **45** complaint investigations, evaluated plans for **17** new or extensively remodeled food service operations and **12** new or extensively remodeled retail food establishments, and conducted **2** educational programs.

PRIVATE WATER SYSTEMS. The Health Department issued permits for the installation and alteration of **139** private water systems and collected **527** water samples for bacteriological and chemical analysis.

PLUMBING SYSTEMS. The Health Department issued **253** permits and made **681** inspections of new plumbing installations and alterations in residential and commercial buildings, in Wayne County and outside of the city of Wooster, for compliance with the state plumbing code.

HOUSEHOLD SEWAGE TREATMENT SYSTEMS provide for the sanitary removal, treatment, and disposal of wastewater from a residential dwelling. Residential sewage disposal systems must be installed, altered, and operated with approval by the health department.

The sewage program staff evaluated **125** newly surveyed lots, issued permits for the installation or alteration of **193** household sewage treatment systems, performed **997** inspections of new and existing household sewage disposal systems, and evaluated **9** new variance requests and **13** medical variance renewals from the sewage code.

SEMI-PUBLIC SEWAGE TREATMENT SYSTEMS provide for the sanitary treatment of wastewater from semi-public (nonresidential) facilities. Semi-public sewage treatment systems are under the jurisdiction of the Ohio EPA, but through a contract with the Ohio EPA semi-public sewage treatment generating less than 25,000 gpd of wastewater are to be inspected by the health department. The sewage program staff evaluates **351** semi-public facilities and completed **271** inspections.

SEPTAGE is the liquid and solid material pumped from septic tanks, aerobic-type treatment units, privies, holding tanks, or

other types of private wastewater disposal systems when they are cleaned. While there are many acceptable disposal alternatives for septage, land application is the most commonly used method in Wayne County. Land application of septage is regulated by the Health Department. Farm fields are licensed and inspected for compliance with Board of Health regulations. The staff working in this program conducted **10** inspections of licensed sites where septage land application was being practiced in 2014.

THE SOLID AND INFECTIOUS WASTE PROGRAM is administered by the Health Department under the oversight of Ohio EPA. We inspect **1** closed Municipal Solid Waste landfill, **1** Residual Waste landfill, **3** Construction and Demolition Debris disposal sites, **17** Composting facilities, as well as **1** Infectious Waste treatment facility and **1** Compost transfer facility. In addition, we inspect on a complaint basis **23** recycling center, **13** clean hard fill sites, and **38** large infectious waste generators in the county. Finally, we investigate all complaints of open dumping or improper solid waste storage or disposal. In 2014, the staff working in the program conducted **186** solid waste-related inspections/investigations/consultations.

RECREATIONAL CAMPGROUNDS in Wayne County are licensed by the Health Department and inspected for compliance with state laws and rules which address design, construction, sanitation, and safety considerations. In 2014, the department licensed **11** Campgrounds, and **4** Temporary Campgrounds and conducted **30** inspections. Beginning January 1, 2013, Manufactured Home Parks were not licensed by the Health Department. MHP are inspected on only a complaint basis. Wayne County Health Department conducted **9** inspections of MHP from complaints.

SWIMMING POOLS AND SPAS in Wayne County are licensed by the Health Department and inspected for compliance with state laws and rules. The department issued **32** Swimming Pool and Spa licenses and conducted **130** inspections.

ANIMAL BITES AND RABIES PREVENTION. Animal bites involving humans are required to be reported to the Health Department. Each is logged and followed up with an appropriate investigation and consultation. Each animal bite forces a decision about whether or not to quarantine the animal, sacrifice and test the animal for rabies, or recommend that the victim submit to treatment with rabies immune globulin and a series of rabies vaccine injections.

In 2014, there were a total of **230** reported animal bites, **130** of which were by dogs. Of a total of **36** specimens sent to the laboratory for testing, none tested positive for rabies.

2014 BUDGET SUMMARY

REVENUES

General Fund	\$ 486,038.33	21.3%
Local Tax Monies	\$ 550,936.99	24.2%
State Subsidy	\$ 21,565.22	0.9%
Special Funds
