The cumulative number of cases were reported to the health department is 8,919 cases with 326 cases reported in the last 4 weeks. Most of the cases reported in the last 4 weeks are less than 50 years of age (67%). The cumulative number of hospitalized cases is 439 with 18 admitted in the last 4 weeks. Most of the hospitalized cases admitted in the last 4 weeks are 60 years of age or older (77%). The cumulative number of Covid19 deaths among Wayne County residents is 244. Two Wayne County residents have died from Covid19 in the last 4 weeks.

Dashboard:

Indicator	Current Week	Previous Week	Trend (# of weeks)	Total to Date
Number of New Cases Reported ¹	107	82	 2	8,919
Number of Hospitalized Cases ¹	3	5	 1	439
Number of Deaths: ²	0	0	 1	244
Number of Presumed Recovered ³				8,461

Number of New Covid19 Cases by Date Reported to the Health Department:

The 7-day average for the number of new cases reported to the Wayne County Health Department is 16 new cases per day.

Percentage of Covid19 Cases by Sex:

During the last 4 weeks, the percentage of Wayne County cases is higher among females (56%) than males (44%). This pattern is consistent with the percentage of cases by sex since the beginning of the pandemic.

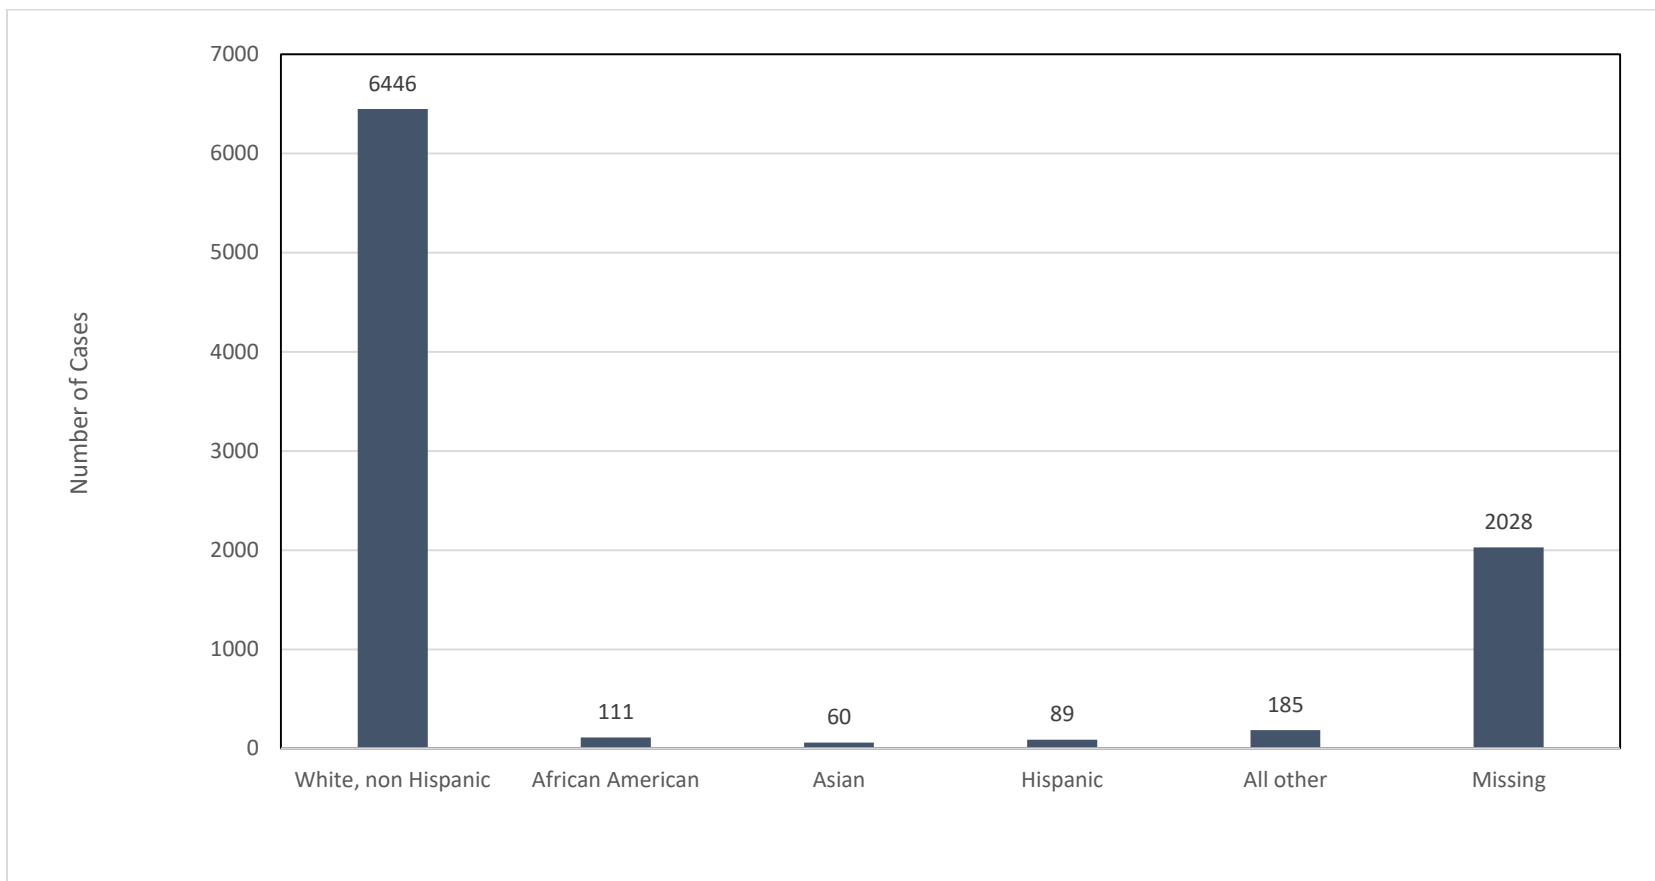

Percentage of Covid19 Cases by Age Group:

During the last 4 weeks, the highest percentage of reported cases have been among individuals 0-19, 30-39, and 40-49 years of age. This pattern is younger than the age distribution of cases since the beginning of the pandemic.

Covid19 Cases by Race and Ethnicity:

Since the beginning of the pandemic, the highest number of reported cases are among White, non-Hispanics (6,446). 111 cases have been identified as Black or African American, 89 cases have been identified as Hispanic, and 60 cases have been identified as Asian. Case rates are higher among Blacks (7,008 per 100,000) compared to White, non-Hispanics (5,875 per 100,000), Hispanics (3,812 per 100,000), and Asians (4,955 per 100,000) (data not shown).

Covid19 Cases by Zip Code (last 2 weeks):

During the last 2 weeks, the highest number of reported cases are from the Wooster (44691) zip code (61 cases) (map below). The highest case rates were found in the Dalton (44618) zip code (data not shown).

Number of Hospitalized Covid19 Cases Reported by Day:

During the last 4 weeks, 18 Wayne County cases have been hospitalized. 6 out of the 18 were admitted to an intensive care unit. Hospitalizations with an unknown or missing admission date are excluded from the chart below.

Covid19 Hospitalizations by Sex:

During the last 4 weeks, the percentage of hospitalized cases were higher among females and males. This pattern is not consistent with the sex distribution of hospitalized cases since the beginning of the pandemic.

Covid19 Hospitalizations by Age Group:

During the last 4 weeks, 77% of hospitalized cases among Wayne County residents are 60 years of age or older. Since the beginning of the pandemic, 74% of hospitalized cases have been among those 60 or older.

Covid19 Hospitalizations by Race and Ethnicity:

Of the 439 hospitalized cases, 404 have been identified as White, non-Hispanic. Seven have been identified as Black or African American, 4 hospitalized case has been identified as Asian and 3 have been identified as Hispanic. Hospitalization rates are higher among white, non-Hispanics (368 per 100,000), African Americans (442 per 100,000), and Asians (330 per 100,000) compared to Hispanics (128 per 100,000) (data not shown).

Covid19 Hospitalizations by Zip Code (Last 4 weeks)

During the last 4 weeks, 6 out of the 18 hospitalizations were residents of the Wooster (44691) zip code. None of the other zip code had more than 3 hospitalized cases (map below).

Number of Covid19 Deaths Reported by Day:

2 Wayne County residents have died from Covid19 during the last 4 weeks.

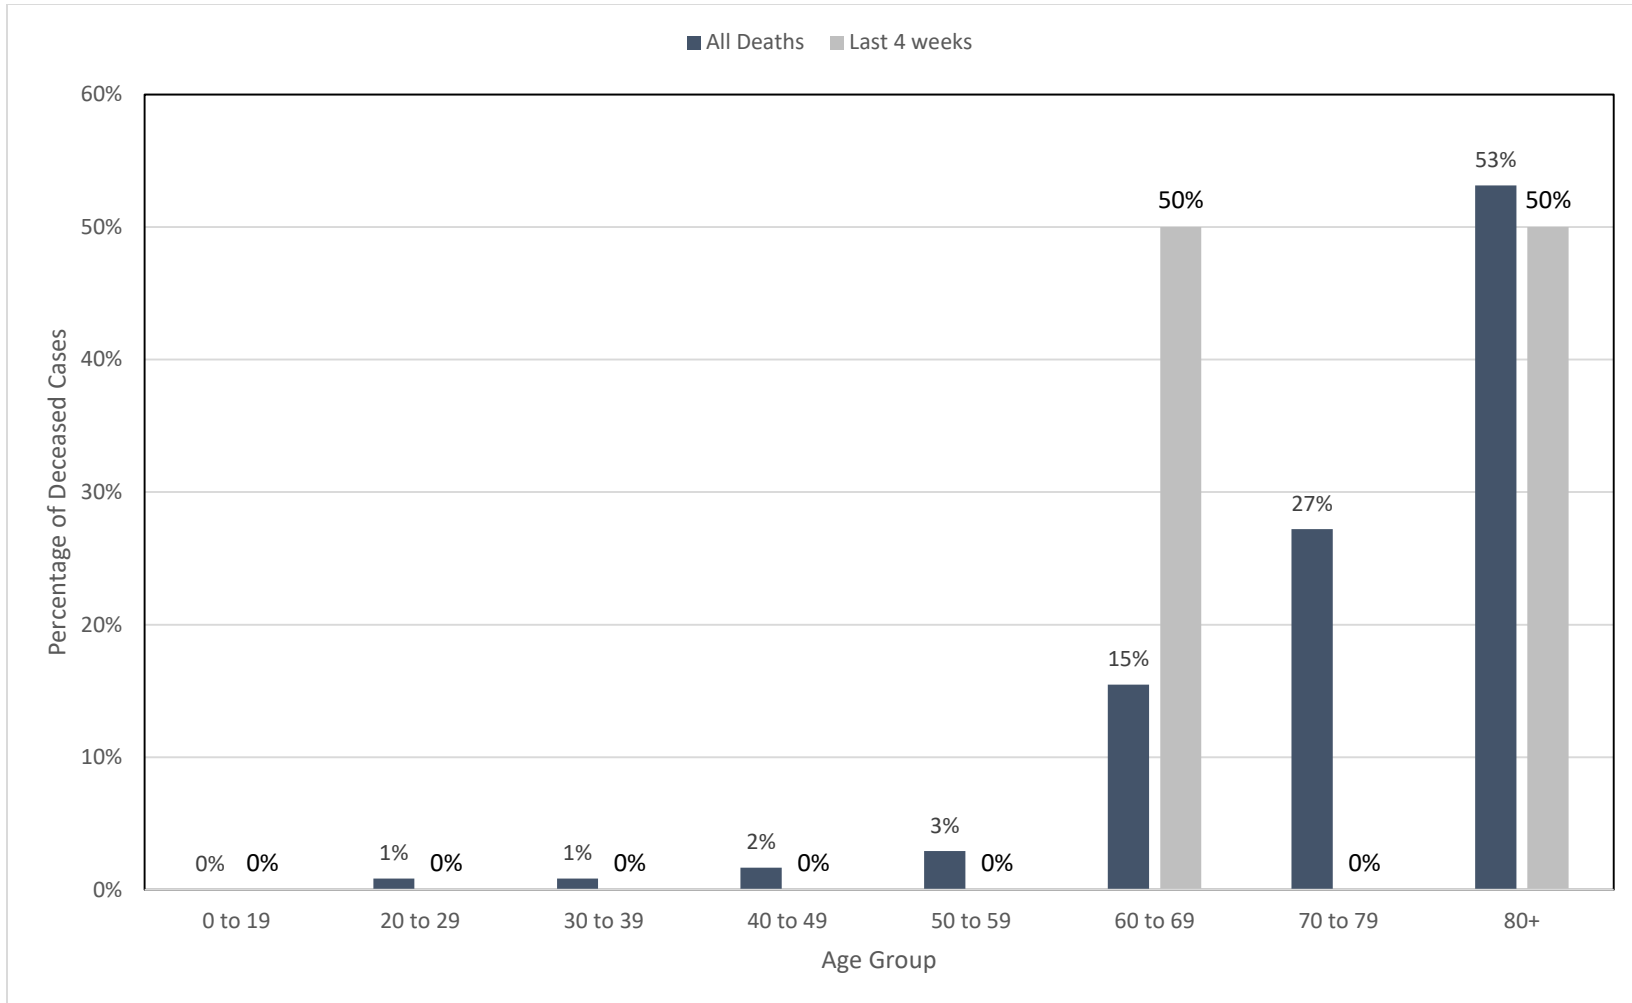

Percentage of Covid19 Deaths by Sex:

During the last 4 weeks, a similar percentage of deaths have occurred among females and males. Since the beginning of the pandemic, the percentage of deaths is higher among males than females.

Percentage of Covid19 Deaths by Age Group:

In the last 4 weeks, 67% of deaths occurred among those 60 years of age or older. Since the beginning of the pandemic, 95% of the decedents were 60 years of age or older.

Covid19 Deaths by Race and Ethnicity:

237 out of the 244 deaths have been identified as white, non-Hispanic. Three decedents have been identified as Asian and one has been identified as African American. Death rates are higher among Asians (248 per 100,000) and white, non-Hispanics (216 per 100,000) compared to African Americans (63 per 100,000) and Hispanics (0 per 100,000).

Cumulative Covid19 Deaths by Zip Code:

121 out of the 244 deaths have occurred among residents of the Wooster (44691) zip code. 35 deaths have occurred among residents of the Orrville (44667) zip code, 22 deaths have occurred among residents of the Rittman (44270) zip code, 18 deaths have occurred among residents of the Dalton (44618) zip code and 18 deaths have occurred among residents of the Doylestown (44230) zip code (map below).

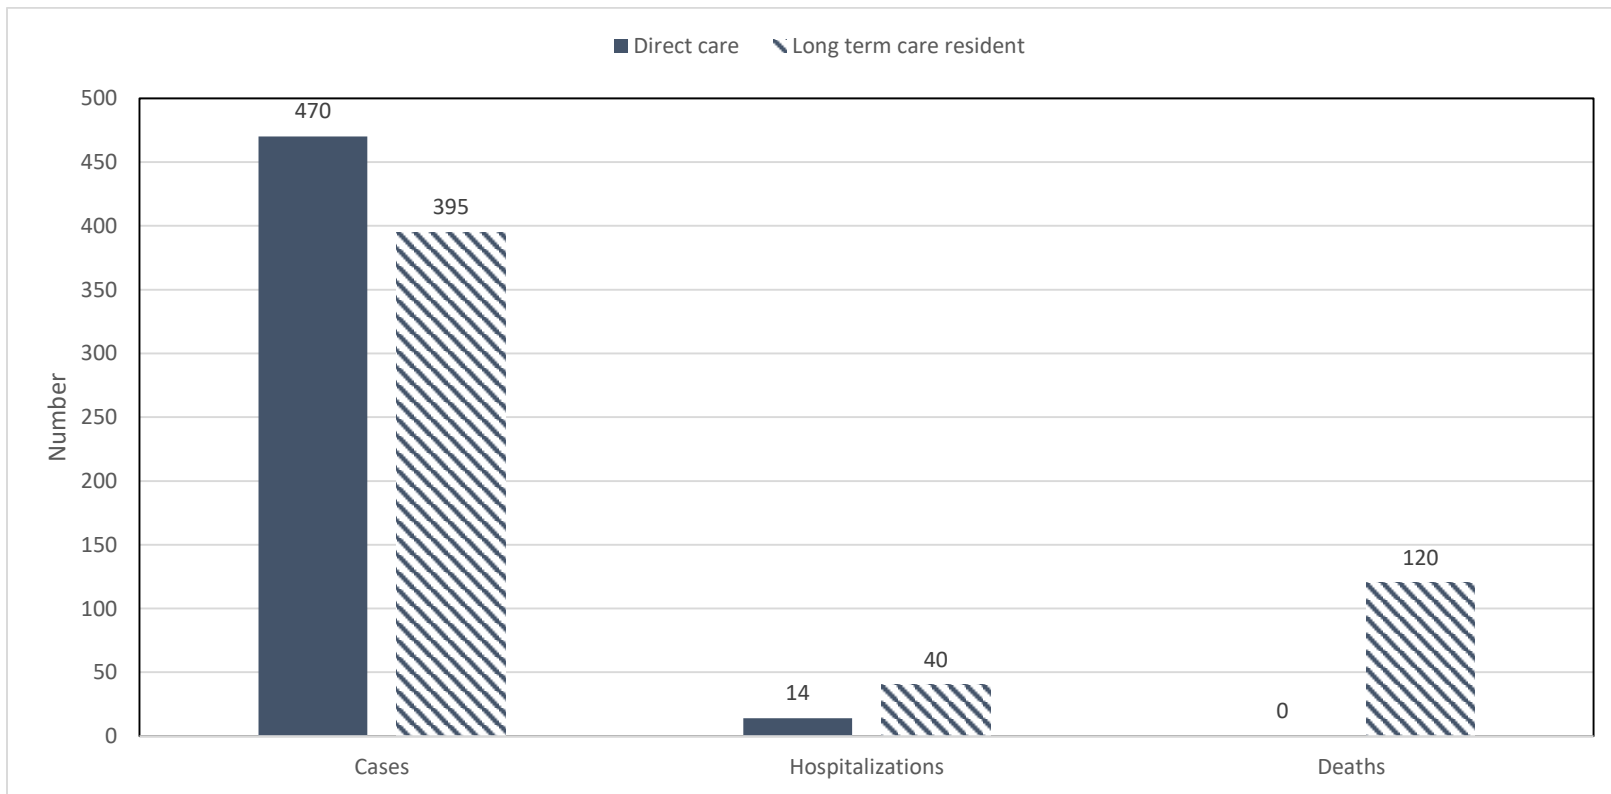

Case Fatality Rates (CFR):

Case fatality rate (CFR) is the percentage of cases who die from a disease divided by the number of people who are diagnosed with the disease. The CFR is used to estimate disease severity. The overall Covid-19 CFR for cases reported to the Wayne County Health Department is 2.9%. CFR increases from 0% for cases ages 0-19 to 25% for cases ages 80 or older (chart below).

Long-Term Care Facility Residents and Health Care Professionals:

395 cases among residents of long-term care facilities have been reported to the health department. Of these cases, 40 have been hospitalized and 120 have died (chart below). The case fatality rate for residents of long-term care facilities is 30%. 470 cases among health care professionals providing direct patient care have reported to the health department. Of these cases, 14 have been hospitalized and 0 have died (chart below).

Data Sources:

1. **Ohio Disease Reporting System (ODRS):** Information on cases of communicable diseases reportable under Ohio Revised Code are housed and maintained by the Ohio Disease Reporting System (ODRS). Corona Virus Disease 2019 (Covid19) is a reportable condition under Ohio Revised Code. Health Care Providers are required to immediately notify their local public health department of Covid19 cases for follow-up. Cases with a classification status of confirmed or probable are included in this report. Confirmed cases are defined as patients that receive a positive laboratory test performed for Covid19. Probable cases must meet clinical criteria and epidemiologic evidence without confirmatory laboratory testing OR meet presumptive laboratory evidence and either clinical criteria or epidemiologic evidence.
2. **Office of Vital Statistics:** The Wayne County Health Department Office of Vital Statistics receives reports on the causes of death that occur within the county. Covid19 deaths were included in this report if they were listed as the immediate or underlying cause of death on the death certificate.
3. **Definition of Recovered:** The number of cases minus the number of deaths minus the number of cases with illness onset in the last 21 days. This does not take into account any new health problems recovered people may now have as a result of a Covid infection.

All data points listed in the report are preliminary. The data reflect the latest numbers on the date of the ODRS query. Data points are subject to change and updated each week.
