

Spray Distribution System

This type of system is primarily characterized as one where sewage from the home/business is highly treated and then dispersed onto the ground for soil absorption.

Due to rule changes effective January 1, 2015 in the state of Ohio, all types of sewage treatment systems are now required to obtain an operational permit from the local health department. These changes are referenced in Ohio Administrative Code Chapter 3701-29, Ohio Revised Code 3718 and additionally Wayne County Health Department Resolution 04-09-2015 (4) (a-j).

The Wayne County Health Department policy is that this operational permit must be obtained by owners of such sewage treatment systems and must be renewed every year and is required to have a service contract maintained for the life of the system. Upon expiration/initial issuance you will be receiving an additional letter explaining options for obtaining the annual permit for your HSTS. In order to obtain a new operational permit a current in-effect copy of your required service contract and proof of maintenance by a service provider shall be provided to the health department each June.

If the required info is not provided an inspection by Wayne County Health Department with a \$75 fee will be required in addition to the items stated above.

Our intent is to assist homeowners in meeting these requirements by providing assistance and answers to questions you may have.
